
MYTHS OF HASTHAR

A game of greed, sacrifice, theft and survival

“Gold is never simply wealth. In Hasthar's world, it is temptation.”

THE WORLD OF HASTHAR

Myths of Hasthar is set in a dark, mythic world where greed has a price. Players gather around the same table as rival seekers of wealth, each carrying a small supply of Flour Dolls and a hand of mysterious cards. Gold Coins are the prize, but every coin attracts danger. The presence of Hasthar turns greed into a deadly bargain: a player may be forced to sacrifice, protected by the sacred, saved by the Goddess, or removed from the struggle entirely.

The central tension is simple: **how much are you willing to risk for gold?** A Hasthar card can turn another player's weakness into your fortune. A Burglar can steal what you need. The Goddess can save a player at the edge of elimination, while the Sacred Line can extinguish Hasthar's attack completely. The game therefore rewards both aggression and careful preservation of defensive cards.

THE OBJECTIVE

Survive the other players and accumulate Gold Coins. The game continues until only one player remains active. If multiple survivors remain at the final resolution, the survivor with the most Gold Coins is declared the winner. If everyone is eliminated, there is no winner.

THE FOUR CARD TYPES

Hasthar

The demon god of gold. On your turn, play Hasthar on **any other active player you choose**. The target is resolved in a strict sequence: Sacred Line, then Flour Doll, then Goddess, and finally elimination.

Burglar

A cunning thief. Target any other active player and attempt to steal **1 Gold Coin or 1 Flour Doll**. If the chosen resource is unavailable, the other resource is automatically attempted instead.

Goddess

Divine protection. When played on your own turn, it gives you **+1 Flour Doll and +1 Gold Coin**. It can also save you reactively from Hasthar when you have 0 Flour Dolls and no Sacred Line.

Sacred Line

A defensive card. It has no beneficial proactive effect: playing it on your own turn simply discards it. When Hasthar attacks while you hold one, it is **compulsorily used** and the attack is extinguished.

THE RESOURCES

Gold Coin

The main prize and victory resource. Gold has an unlimited supply in the rules: it is created as a reward, transferred by Burglar, or transferred when a player is eliminated. Gold is visible to everyone.

Flour Doll

The sacrificial resource. Players begin with the chosen number of Flour Dolls. When Hasthar attacks a player who has at least one Doll, exactly one Doll is sacrificed and the attacker receives 1 Gold Coin. Dolls are also gained through the Goddess.

Discard Pile

Played cards go to a reusable discard pile. When an active player has no cards, or only Sacred Lines, the player automatically receives a fresh hand drawn randomly from the discard pile.

SETUP

- 1. Choose players.** The current game supports 3 or 4 players in the browser version; the LAN server supports 2–8 seats, with the host choosing the configured number.
- 2. Build the Greed Deck.** Choose how many Hasthar, Burglar, Goddess and Sacred Line cards to include. The deck is shuffled.
- 3. Choose starting Flour Dolls.** Each player receives the selected number of Dolls.
- 4. Deal the cards.** The deck is divided as evenly as possible among the players. Any cards left after dealing become the initial discard pile.
- 5. Begin with zero Gold Coins.** The first seat begins the turn cycle.

IMPORTANT

Card counts are configurable. The standard defaults shown by the current browser build are 3 players: 6 Hasthar, 4 Burglar, 2 Goddess, 3 Sacred Line; or 4 players: 8 Hasthar, 6 Burglar, 3 Goddess, 4 Sacred Line. Starting Flour Dolls default to 2. These are defaults, not fixed requirements.

HOW A TURN WORKS

1. Check the turn

Turns proceed in player order. Only the player whose turn it is may play a card.

2. Choose a card

You may play Hasthar, Burglar, Goddess, or Sacred Line according to its rules.

3. Choose a target when required

Hasthar and Burglar can target **any other active player**. There is no fixed cyclic attack target.

4. Resolve the card

Apply the complete card effect before the turn advances.

5. Refill if necessary

If an active player's hand becomes empty, or contains only Sacred Line cards, the player automatically draws a fresh hand from the discard pile when cards are available.

6. Advance the turn

The turn moves to the next active player in the turn order. Eliminated players are skipped.

HASTHAR: EXACT RESOLUTION ORDER

① SACRED LINE

If the target holds a Sacred Line, it is compulsorily used. The attack ends immediately. No Flour Doll is sacrificed and no Gold Coin is awarded.

② FLOUR DOLL

If the target has at least 1 Flour Doll, exactly one is sacrificed. The Hasthar player receives 1 Gold Coin.

③ GODDESS

If the target has 0 Flour Dolls but holds a Goddess, the Goddess is used for protection. The target survives and receives 1 Flour Doll and 1 Gold Coin.

④ ELIMINATION

If the target has 0 Flour Dolls, no Sacred Line, and no Goddess, the target is eliminated. All of that player's Gold Coins pass to the Hasthar player. Their remaining hand is discarded.

CARD-BY-CARD RULES

BURGLAR

Choose any other active player. Then choose **Gold Coin** or **Flour Doll**. If the target has at least one of the requested resource, steal exactly one. If the requested resource is unavailable, the game automatically switches to the other resource. If the target has neither, the Burglar is still discarded and the turn is wasted.

GODDESS

On your own turn, playing the Goddess immediately gives you 1 Flour Doll and 1 Gold Coin. Separately, the Goddess has a defensive role against Hasthar: if Hasthar attacks you when you have zero Flour Dolls and you do not have a Sacred Line, the Goddess can be revealed and used to save you. You then gain 1 Flour Doll and 1 Gold Coin and remain in the game.

SACRED LINE

The Sacred Line is primarily defensive. It does not provide a normal reward when deliberately played on your own turn; doing so simply sends it to the discard pile. Its special power occurs automatically when Hasthar attacks you. If you hold a Sacred Line, it is **compulsorily** used. The attack is completely extinguished before any Doll is sacrificed. The used Sacred Line enters the discard pile and can later be drawn again.

REFILLING YOUR HAND

Running out of usable cards is not a way to escape the game. An active player whose hand is empty, or whose hand contains only Sacred Line cards, automatically receives a fresh hand from the reusable discard pile whenever cards are available. The fresh hand contains up to **players + 1 cards**. If fewer cards are available, the player receives whatever remains.

ELIMINATION & GOLD

When a player is eliminated by Hasthar, their Gold Coins are transferred to the player who attacked them. Their remaining cards are placed in the discard pile and their seat becomes inactive. Eliminated players do not take further turns.

WINNING

The game ends when only one active player remains. That surviving player wins with their current Gold Coin total. If no player survives, the game records **NO WINNER**. The game log records the number of players, card counts, starting Dolls, turns, winner and winner's Gold.

PLAYING MULTIPLAYER OVER LOCAL WI-FI

The multiplayer edition runs as a local network server. One computer hosts the game and the other players join from phones or laptops connected to the same Wi-Fi network. No internet connection or player accounts are required.

- **1. Install Node.js** on the host computer if it is not already installed. Use the LTS release.
- **2. Open a terminal** in the game folder.
- **3. Install dependencies** by running `npm install`.
- **4. Start the server** with `npm start`.
- **5. Read the addresses** printed in the terminal. The host uses the localhost address; other players use the displayed `http://192.168.x.x:8080`-style LAN address.
- **6. Connect everyone** to the same Wi-Fi network and open the LAN address in their browsers.
- **7. The first connected player is the host.** The host chooses the number of players, card quantities, and starting Flour Dolls.
- **8. Start the game** once the configured number of players has joined.
- **9. During play**, each player sees only their own hand. Gold, Flour Dolls and card counts are public.
- **10. After the game**, the host can choose New Game to start another round.

RECONNECTING

If a player's browser is refreshed or the phone temporarily locks, reopening the same game address can reconnect the player to their reserved seat. The server keeps the seat reserved for reconnection.

GAME LOG

The multiplayer server stores completed games in `game_log.json`. The game log can be viewed from the interface and contains statistics such as player count, card setup, starting Dolls, number of turns, winner, and winner's Gold.

OWNERSHIP & USE

Myths of Hasthar is an original game project created and owned by **Satyajeet Patil**. The project is provided publicly so people can play and explore it. No commercial rights are granted. Commercial reproduction, publication, sale, licensing, or creation of a commercial game based substantially on this project or its original creative elements requires permission from the owner.
